DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the features as recited in claims 1-20 are not readable on the drawings of the present invention must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1-20 are not readable on the drawings of the present invention. Applicant is requested to particularly point out each of elements as recited in claims 1-20 to be read on the respective elements in the corresponding drawings of the present invention in order to help the examiner to understand the subject matter of the claimed invention.

Claim 1, it is not clear how a first conductive line can comprise a gate of a first transistor and a gate of a second transistor; the connective relationship of the magnetic cell junctions, the first conductive line, the first and second transistors is not clearly defined.

Claim 2, the connective relationship of the first and second sets of magnetic cell junctions, the first conductive line, the first and second transistors is not clearly defined.

Claim 4, it is not clear how a second conductive line can comprise a gate of a third transistor and a gate of a fourth transistor; the connective relationship of the second conductive line, the first, second, third and fourth transistors is not clearly defined.

Claims 17-20, it is not clear what the conductive structures really are.

Claim 18, the word "about" is vague and indefinite.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-20 are, insofar as definite, rejected under 35 U.S.C. 103(a) as being unpatentable over Pancholy et al., 6,639,831.

Pancholy et al., 6,639,831, discloses in Fig. 3 a memory cell array 60 comprising:
a plurality of magnetic cell junctions 80;
first conductive line 64;
second conductive line 79;
transistors 68 and 78;
word line 76;
bit lines 86 and 88 spaced above and arranged in vertical alignment with a plurality of magnetic cell junctions 80;
select line 70;
current source lines/program lines 61-62
series of contact structures 39 (see last line, column 11 and first line, column 12).

What is not shown in Pancholy et al., 6,639,831, is the remaining features as recited in claims 1-20. However, since the claims 1-20 are vague and indefinite as rejected under 35 USC 112, second paragraph, as set forth above, claims 1-20 are, insofar as definite, rendered obvious under 35 USC 103(a) as being unpatentable over Pancholy et al., 6,639,831.
